## Declaration of Originality

I, **Suthar Aryan Sujalkumar**, holder of Enrolment Number **23C25512**, hereby declare that:

1. This report is the result of my own work and investigations, except where otherwise stated and referenced.
2. This report has not been submitted previously, in whole or in part, for any other academic award at this or any other institution.
3. Where other sources of information have been used, they have been acknowledged in the text and listed in the Bibliography.
4. I am aware of and understand the university's policy on plagiarism and certify that this thesis does not involve plagiarism.
5. The content of this report has been verified and is not misleading or inaccurate. Any opinions expressed are my own.
6. The work described in this report was carried out as part of the internship at **Bharti Soft Tech Pvt. Ltd.** during the period **17th November 2025** to **17th May 2026**.

**Student Name:** Suthar Aryan Sujalkumar

**Enrolment Number:** 23C25512

**Programme:** B.Tech (Information Technology)

**Signature:** \_\_\_\_\_

*I acknowledge that a false declaration is a form of academic dishonesty and may result in disciplinary action.*

## Acknowledgements

The completion of this internship report would not have been possible without the guidance, support, and encouragement of several individuals. The author expresses sincere gratitude to all who contributed to this endeavour.

Firstly, the author would like to thank **Dr. Ashutosh Abhangi**, External Supervisor, Bharti Soft Tech Pvt. Ltd., for providing invaluable industry guidance, constructive feedback, and continuous mentorship throughout the internship period. His expertise in software development and project management greatly facilitated the successful delivery of the Smart Gym Management System.

Secondly, sincere appreciation is extended to the management and technical team at **Bharti Soft Tech Pvt. Ltd.** for providing the opportunity to undertake this internship and for their support throughout the placement. The practical exposure gained during this internship proved instrumental in bridging the gap between academic learning and professional software engineering practice.

The author also wishes to acknowledge the faculty of the School of Computer Science Engineering & Technology at ITM SLS Baroda University for their academic guidance and support throughout the B.Tech (IT) programme.

Finally, sincere gratitude is extended to family and friends for their unwavering encouragement and moral support.

## Abstract

The fitness industry has experienced a significant shift towards digital platforms, with gym operators increasingly requiring integrated software solutions for membership management, trainer coordination, and business analytics. This report presents the design, development, and evaluation of the Smart Gym Management System, a comprehensive full-stack web application developed during an internship at Bharti Soft Tech Pvt. Ltd. under the supervision of Dr. Ashutosh Abhangi.

The system addressed the limitations of existing commercial solutions — particularly their high cost, inflexibility, and lack of real-time communication capabilities — by delivering a modular, open-source platform suitable for gyms of varying sizes. The proposed system employs a multi-role architecture supporting four distinct user roles: Member, Trainer, Gym Owner, and Super Administrator, each with role-specific dashboards and access controls enforced through Role-Based Access Control (RBAC).

The system was developed using React 18 with TypeScript for the frontend and Spring Boot 3 with Java 17 for the backend, connected to an Oracle database. Real-time communication was achieved through WebSocket integration using the STOMP protocol. Authentication was implemented using JSON Web Tokens (JWT), with optional Two-Factor Authentication (2FA) via email OTP.

Key features delivered include membership lifecycle management, personal training session booking, progress tracking, real-time chat, financial reporting, and a comprehensive notification system. The system follows a layered architecture comprising presentation, business logic, data access, and persistence layers, ensuring maintainability and scalability.

Testing confirmed that the system met defined performance targets, achieving API response times below 200 milliseconds at the 95th percentile. Security measures including BCrypt password hashing, CORS policy enforcement, and parameterised queries were validated against OWASP guidelines.

---

The internship provided Aryan Suthar with extensive practical experience in full-stack development, agile project management, and professional software engineering, significantly reinforcing skills acquired during the B.Tech (IT) programme.

**Keywords:** Gym Management System, React, Spring Boot, Oracle, Role-Based Access Control, JWT, WebSocket.

## **List of Tables**

## **List of Figures**

## List of Symbols

| Symbol | Meaning                                         |
|--------|-------------------------------------------------|
| →      | Denotes a directional flow or transition        |
| ↔      | Denotes bi-directional communication            |
| <      | Less than                                       |
| ≤      | Less than or equal to                           |
| %      | Percentage                                      |
| @      | Java annotation prefix (e.g. @Entity, @Version) |
| *      | Wildcard or zero-or-more occurrences            |
| { }    | Denotes a set or a code block                   |

## List of Abbreviations

| Abbreviation | Definition                                     |

# **Chapter 1**

## **Chapter 1: Introduction**

### **1.1 1.1 Background of the Organisation**

Bharti Soft Tech Pvt. Ltd. is a software development company based in India, specialising in the design and delivery of custom technology solutions for businesses across diverse sectors including healthcare, fitness, education, and e-commerce. The organisation's core focus is on building accessible, scalable, and cost-effective digital platforms that address real-world operational challenges faced by small and medium-sized enterprises.

During the internship period, the author was placed within the Software Development Department at Bharti Soft Tech Pvt. Ltd. and was tasked with contributing to the end-to-end design and development of a full-stack Smart Gym Management System. The development team operated under an agile project management methodology, with clearly defined sprint cycles, daily stand-up meetings, and regular stakeholder reviews.

The organisation employs a collaborative, full-stack approach to software development, leveraging modern frameworks and enterprise technologies to deliver production-ready applications. Under the supervision of Dr. Ashutosh Abhangi (External Supervisor), the intern was given comprehensive exposure to professional development practices, architectural decision-making, and code quality standards.

### **1.2 1.2 Objectives of the Organisation**

The primary objectives of Bharti Soft Tech Pvt. Ltd. are as follows:

1. To deliver robust, scalable, and maintainable custom software solutions to clients across multiple industries.
2. To reduce the cost and complexity of enterprise software adoption for small and medium-sized businesses.

3. To adhere to industry best practices in security, performance, and software architecture.
4. To provide mentorship and real-world project exposure to interns and junior developers.
5. To continuously adopt modern technology stacks that align with current industry trends.

These objectives directly shaped the technical and functional requirements of the Smart Gym Management System developed during this internship.

### 1.3 1.3 Products and Main Services of the Organisation

Bharti Soft Tech Pvt. Ltd. offers the following core products and services:

| Product / Service                         | Description                                                |
|-------------------------------------------|------------------------------------------------------------|
| <b>Custom Web Application Development</b> | Full-stack web applications built to client specifications |
| <b>Mobile Application Development</b>     | Cross-platform mobile apps for Android and iOS             |
| <b>API Development &amp; Integration</b>  | RESTful API design and third-party service integration     |
| <b>Database Design &amp; Optimisation</b> | Schema design, query tuning, and migration services        |
| <b>IT Consultancy</b>                     | Technical advisory for digital transformation projects     |

The Smart Gym Management System developed during this internship represents a flagship product demonstrating the organisation's capability in delivering comprehensive, multi-role enterprise web applications.

### 1.4 1.4 Organisation Structure and Workflow

The internship was conducted within the Software Development Department at Bharti Soft Tech Pvt. Ltd. The department follows a flat hierarchy that promotes open collab-

oration between senior developers, junior developers, and interns. The author worked under the direct supervision of Dr. Ashutosh Abhangi throughout the placement.

The development workflow followed the Agile Scrum methodology:

- **Sprint Planning:** Requirements were broken down into user stories and allocated to two-week sprint backlogs at the start of each cycle.
- **Daily Stand-ups:** Brief daily synchronisation meetings were held to communicate progress and identify blockers.
- **Sprint Reviews:** Completed features were demonstrated to the supervisor at the end of each sprint for feedback and acceptance.
- **Retrospectives:** Process improvement discussions were conducted at the end of each sprint to optimise team productivity.

Version control was managed using Git with a feature-branch strategy, hosted on GitHub. Code quality was maintained through pull request reviews, and the project board was used for task tracking throughout the development lifecycle.

## Chapter 2

### Literature Review - Gym Management System

#### 2.1 1. Introduction

The fitness industry has experienced significant digital transformation, with gym management systems evolving from simple membership tracking tools to comprehensive platforms integrating member engagement, trainer coordination, and business analytics. This literature review examines existing solutions, technological approaches, and design patterns that influenced the development of this system.

#### 2.2 2. Existing Gym Management Systems

##### 2.2.1 2.1 Commercial Solutions

| System             | Key Features                         | Limitations               |
|--------------------|--------------------------------------|---------------------------|
| <b>Mindbody</b>    | Booking, payments, marketing         | High cost, complex setup  |
| <b>Zen Planner</b> | Membership, billing, reporting       | Limited customization     |
| <b>GymMaster</b>   | Access control, POS, member app      | Desktop-focused           |
| <b>PushPress</b>   | CRM, automation, mobile app          | Pricing tier restrictions |
| <b>Wodify</b>      | CrossFit focus, performance tracking | Niche market focus        |

##### 2.2.2 2.2 Gap Analysis

Existing solutions often present challenges: - **Cost Barriers**: Enterprise pricing models exclude small gyms - **Inflexibility**: Limited customization for unique workflows - **Integration Complexity**: Difficulty integrating with existing tools - **Feature Overload**: Unnecessary complexity for basic needs

Our system addresses these by providing: - Open-source foundation for cost reduction - Modular architecture for customization - REST API for easy integration - Role-based feature access

## 2.3 3. Technology Stack Justification

### 2.3.1 3.1 Frontend: React with TypeScript

**Selection Rationale:** - **Component-Based Architecture:** Enables reusable UI components [1] - **Virtual DOM:** Optimizes rendering performance [2] - **TypeScript:** Adds type safety, reducing runtime errors by 15-25% [3] - **Ecosystem:** Rich library support (React Router, Axios, Framer Motion)

**Alternatives Considered:** - Vue.js: Simpler learning curve but smaller ecosystem - Angular: More opinionated, steeper learning curve - Svelte: Newer, less enterprise adoption

### 2.3.2 3.2 Backend: Spring Boot with Java

**Selection Rationale:** - **Enterprise Ready:** Battle-tested in production environments [4] - **Dependency Injection:** Promotes loose coupling and testability - **Spring Security:** Comprehensive authentication/authorization [5] - **JPA/Hibernate:** Robust ORM with Oracle support - **Convention over Configuration:** Rapid development

**Alternatives Considered:** - Node.js/Express: JavaScript fatigue, callback complexity - Django: Python GIL limitations for concurrent workloads - .NET Core: Smaller open-source community

### 2.3.3 3.3 Database: Oracle

**Selection Rationale:** - **ACID Compliance:** Data integrity for financial transactions - **Scalability:** Handles growing member data - **Enterprise Features:** Advanced security, auditing - **JPA Compatibility:** Seamless Hibernate integration

## 2.4 4. Architectural Patterns

### 2.4.1 4.1 Multi-Tenancy

The system implements **Schema-Level Multi-Tenancy** where: - Each gym operates as an isolated tenant - Data segregation ensures privacy - Shared infrastructure reduces costs

This approach aligns with SaaS best practices described by Chong and Carraro [6].

### 2.4.2 4.2 Role-Based Access Control (RBAC)

Implementation follows NIST RBAC model [7]: - **Core RBAC**: User-role and role-permission assignments - **Hierarchical RBAC**: Role inheritance (Admin > Owner > Trainer > Member) - **Constrained RBAC**: Separation of duties for sensitive operations

### 2.4.3 4.3 JWT-Based Authentication

Stateless authentication using JSON Web Tokens aligns with RFC 7519 [8]: - Self-contained claims reduce database lookups - Enables horizontal scaling - Supports single sign-on patterns

## 2.5 5. Real-Time Communication

### 2.5.1 5.1 WebSocket Implementation

The chat system utilizes WebSocket (RFC 6455) [9] for: - Bi-directional communication - Lower latency than polling (< 50ms vs 1000ms+) - Reduced server load

Implementation uses Spring WebSocket with STOMP protocol for message routing.

### 2.5.2 5.2 Push Notifications

Notification system implements observer pattern [10]: - Event-driven architecture - Loose coupling between modules - Scalable message delivery

## 2.6 6. Security Considerations

### 2.6.1 6.1 Authentication Security

- **Password Hashing:** BCrypt with 12 rounds (recommended by OWASP [11])
- **Token Security:** JWT with HMAC-SHA512 signature
- **Session Management:** Stateless tokens with expiry

### 2.6.2 6.2 Data Protection

- **Input Validation:** Server-side validation prevents injection
- **CORS Policy:** Whitelist-based origin control
- **Soft Deletes:** Data recovery support

## 2.7 7. Related Work

### 2.7.1 7.1 Academic Research

---

| Study                | Focus                    | Relevance              |
|----------------------|--------------------------|------------------------|
| Sharma et al. (2020) | Fitness app UX patterns  | UI design principles   |
| Chen & Lee (2019)    | Gym member retention     | Engagement features    |
| Rodriguez (2021)     | SaaS multi-tenancy       | Architecture decisions |
| Williams (2022)      | Microservices in fitness | Scalability patterns   |

---

### 2.7.2 7.2 Industry Standards

- **GDPR Compliance:** Data protection for EU markets
- **PCI-DSS:** Payment data security guidelines
- **WCAG 2.1:** Accessibility standards

## 2.8 8. Comparative Analysis

| Feature            | Our System | Mindbody | Zen Planner |
|--------------------|------------|----------|-------------|
| Multi-Role Auth    | Yes        | Yes      | Yes         |
| Real-time Chat     | Yes        | No       | No          |
| OAuth Integration  | Yes        | Yes      | Partial     |
| Progress Tracking  | Yes        | Yes      | Yes         |
| Custom Branding    | Yes        | Paid     | Paid        |
| API Access         | Yes        | Paid     | Limited     |
| Open Source        | Yes        | No       | No          |
| Self-Hosted Option | Yes        | No       | No          |

## 2.9 9. Conclusion

This gym management system synthesizes best practices from commercial solutions while addressing their limitations. The technology stack combines proven frameworks (React, Spring Boot) with modern patterns (JWT auth, WebSocket) to deliver a scalable, secure, and user-friendly platform.

Key innovations include: - Unified multi-role authentication - Real-time trainer-member communication - Comprehensive progress tracking - Flexible membership management

The modular architecture ensures adaptability for diverse gym requirements while maintaining code quality and security standards.

## **Chapter 3**

### **Chapter 3: Overall Experience Gained from the Internship**

#### **3.1 3.1 Reason for Selecting the Organisation**

The decision to undertake the internship at Bharti Soft Tech Pvt. Ltd. was motivated by several specific factors. The organisation's strong focus on delivering custom, real-world software solutions across multiple sectors provided an ideal environment for applying and extending the skills acquired during the B.Tech (IT) programme. The opportunity to work under the guidance of an experienced industry professional, Dr. Ashutosh Abhangi, was particularly appealing, given his background in enterprise application development.

The internship offered the opportunity to work on a greenfield project — the Smart Gym Management System — which required designing and implementing a production-grade, multi-role full-stack application from inception. This aligned with the author's academic interests in web application development, database design, and software architecture. The organisation's use of a modern, enterprise-grade technology stack (React, Spring Boot, Oracle) also ensured that the skills developed during the placement would be directly relevant to the industry.

Furthermore, Bharti Soft Tech Pvt. Ltd.'s collaborative and mentorship-oriented culture provided an environment conducive to professional growth, where constructive feedback and independent problem-solving were equally encouraged.

#### **3.2 3.2 Workflow of the Department**

The Software Development Department at Bharti Soft Tech Pvt. Ltd. operated under an Agile Scrum framework. The author was embedded within the development team under the supervision of Dr. Ashutosh Abhangi (External Supervisor) and collaborated with se-

nior developers on both the frontend and backend layers of the Smart Gym Management System.

The weekly workflow followed the structure outlined below:

---

| Day                | Activity                                                            |
|--------------------|---------------------------------------------------------------------|
| Monday             | Sprint planning and backlog grooming                                |
| Tuesday – Thursday | Active feature development and daily stand-ups                      |
| Friday             | Code reviews, pull request merges, sprint review, and retrospective |

---

Each sprint produced a functional increment of the system, which was deployed to a local staging environment for review. Tasks were tracked using GitHub Issues, and the project board was maintained throughout the development period to provide visibility into the status of each feature.

The development environment included Visual Studio Code (frontend), IntelliJ IDEA (backend), and Postman for API testing. The Oracle database was managed using Oracle SQL Developer for schema design and query verification.

### 3.3 3.3 Tasks Allotted During the Internship

The internship tasks were distributed across frontend and backend development, covering all major modules of the Smart Gym Management System. The following tasks were completed over the course of the internship under the supervision of Dr. Ashutosh Abhangi:

#### 3.3.1 3.3.1 Frontend Development (React + TypeScript)

- Designed and implemented the **multi-role dashboard** system, delivering distinct, role-specific dashboards for Members, Trainers, Gym Owners, and Super Administrators using React 18 and TypeScript.
- Developed reusable UI components for membership packages, personal training sessions, progress tracking charts (Recharts), and financial analytics dashboards.

- Implemented the **real-time chat interface** using Socket.io client, integrating Web-Socket communication for live message delivery, read receipts, and presence indicators.
- Built the **notification centre** with in-app toast notifications and badge counters, consuming server-sent events from the backend via WebSocket.
- Created responsive CSS layouts for all pages, ensuring compatibility across screen sizes.
- Integrated Axios for all API communication, implementing request/response interceptors for JWT token injection and global error handling.

### 3.3.2 3.3.2 Backend Development (Spring Boot + Java + Oracle)

- Implemented the **authentication and authorisation layer** using Spring Security 6 and JWT, including JWT generation, validation, refresh token management, and Two-Factor Authentication (2FA) via email OTP.
- Developed the **membership management module**, covering package creation, subscription approval workflows, auto-expiry scheduling, and status transitions (Active, Expired, Suspended).
- Built the **personal training session booking system**, enabling members to browse trainer availability, book sessions, and receive session confirmations with credit deduction tracking.
- Implemented Spring WebSocket with STOMP message routing for the real-time messaging subsystem.
- Designed and optimised JPA entity relationships and repository queries for the Oracle database, applying lazy loading and strategic indexing to achieve sub-200ms API response times.
- Configured method-level security using `@PreAuthorize` annotations to enforce role-based access control at the service layer.

### 3.3.3 3.3.3 Documentation and Testing

- Authored all technical documentation in the `docs/` directory, including system architecture diagrams, ER diagrams, UML class and sequence diagrams, and DFD models using Mermaid.js.

- Participated in code review sessions, providing and receiving feedback on code quality, security practices, and performance optimisation.
- Wrote unit tests for critical service methods using JUnit 5 and Mockito, covering authentication, membership, and session booking modules.

## Chapter 4

### System Architecture - Gym Management System

#### 4.1 High-Level Architecture

## 4.2 Technology Stack

### 4.2.1 Frontend

| Technology              | Version | Purpose                 |
|-------------------------|---------|-------------------------|
| <b>React</b>            | 18.x    | UI Library              |
| <b>TypeScript</b>       | 5.x     | Type Safety             |
| <b>Vite</b>             | 5.x     | Build Tool              |
| <b>React Router</b>     | 6.x     | Client Routing          |
| <b>Axios</b>            | 1.x     | HTTP Client             |
| <b>Socket.io Client</b> | 4.x     | Real-time Communication |
| <b>Framer Motion</b>    | 10.x    | Animations              |
| <b>Lucide React</b>     | -       | Icons                   |
| <b>Recharts</b>         | 2.x     | Data Visualization      |

### 4.2.2 Backend

| Technology              | Version | Purpose                        |
|-------------------------|---------|--------------------------------|
| <b>Spring Boot</b>      | 3.x     | Application Framework          |
| <b>Java</b>             | 17+     | Programming Language           |
| <b>Spring Security</b>  | 6.x     | Authentication & Authorization |
| <b>Spring Data JPA</b>  | 3.x     | Data Access                    |
| <b>Spring WebSocket</b> | -       | Real-time Messaging            |
| <b>Hibernate</b>        | 6.x     | ORM                            |
| <b>Lombok</b>           | 1.18.x  | Boilerplate Reduction          |
| <b>JWT</b>              | 0.11.x  | JWT Handling                   |

### 4.2.3 Database & Infrastructure

| Technology             | Purpose            |
|------------------------|--------------------|
| <b>Oracle Database</b> | Primary Data Store |

| Technology          | Purpose            |
|---------------------|--------------------|
| <b>Spring Cache</b> | Response Caching   |
| <b>HikariCP</b>     | Connection Pooling |

#### 4.2.4 External Services

| Service               | Purpose             |
|-----------------------|---------------------|
| <b>Google OAuth</b>   | Social Login        |
| <b>Facebook OAuth</b> | Social Login        |
| <b>SMTP</b>           | Email Notifications |
| <b>Twilio</b>         | SMS OTP             |

## 4.3 Component Architecture

## 4.4 Authentication Flow

## 4.5 Database Architecture

## 4.6 Deployment Architecture

## 4.7 Security Architecture

| Layer                 | Mechanism    | Implementation            |
|-----------------------|--------------|---------------------------|
| <b>Transport</b>      | TLS/HTTPS    | SSL Certificate           |
| <b>Authentication</b> | JWT          | Spring Security + JJWT    |
| <b>Authorization</b>  | RBAC         | Custom Permission Service |
| <b>Password</b>       | BCrypt       | Spring Security           |
| <b>Session</b>        | Stateless    | JWT Tokens                |
| <b>2FA</b>            | OTP          | Email/SMS Verification    |
| <b>Data</b>           | Soft Deletes | Entity Annotations        |
| <b>CORS</b>           | Whitelist    | Spring CORS Config        |

## 4.8 Scalability Considerations

1. **Multi-Tenancy:** Each gym is a separate tenant with isolated data
2. **Caching:** Spring Cache for frequently accessed data
3. **Connection Pooling:** HikariCP for database connections
4. **Lazy Loading:** JPA relationship optimization
5. **Stateless Auth:** JWT enables horizontal scaling
6. **WebSocket:** Dedicated connection management for real-time features

| Store        | Description   | Key Fields            |
|--------------|---------------|-----------------------|
| Users        | System users  | user_id, email, roles |
| Memberships  | Subscriptions | id, user_id, status   |
| Sessions     | PT records    | id, trainer_id, date  |
| Messages     | Chat messages | id, content           |
| Transactions | Payments      | id, amount, status    |

## Chapter 8

### Algorithms - Gym Management System

#### 8.1 1. JWT Authentication Algorithm

##### 8.1.1 Token Generation

ALGORITHM: JWT\_Token\_Generation

INPUT: User user, Set<Role> roles

OUTPUT: String jwtToken

BEGIN

    // Create claims payload

    claims = {

        "sub": user.username,

        "userId": user.userId,

        "email": user.email,

        "roles": roles.map(r -> r.roleName),

        "iat": currentTimestamp(),

        "exp": currentTimestamp() + TOKEN\_VALIDITY\_MS

    }

    // Sign with HMAC-SHA512

    header = {

        "alg": "HS512",

        "typ": "JWT"

    }

    signature = HMAC\_SHA512(

        base64Encode(header) + "." + base64Encode(claims),

```
        SECRET_KEY
    )

    RETURN base64Encode(header) + "." +
           base64Encode(claims) + "." +
           base64Encode(signature)

END
```

### 8.1.2 Token Validation

ALGORITHM: JWT\_Token\_Validation

INPUT: String token

OUTPUT: Claims claims OR Exception

```
BEGIN

    parts = token.split(".")

    IF parts.length != 3 THEN
        THROW InvalidTokenException
    END IF

    header = base64Decode(parts[0])
    claims = base64Decode(parts[1])
    signature = parts[2]

    // Verify signature
    expectedSig = base64Encode(HMAC_SHA512(
        parts[0] + "." + parts[1],
        SECRET_KEY
    ))

    IF signature != expectedSig THEN
        THROW SignatureVerificationException
    END IF
END
```

```
END IF

// Check expiration
IF claims.exp < currentTimestamp() THEN
    THROW TokenExpiredException
END IF

RETURN claims
END
```

## 8.2 2. Role-Based Access Control (RBAC) Algorithm

### 8.2.1 Permission Check

```
ALGORITHM: RBAC_Permission_Check
INPUT: User user, String module, String action
OUTPUT: Boolean hasPermission

BEGIN
    // Get all user roles
    userRoles = user.getRoles()

    // Iterate through roles
    FOR EACH role IN userRoles DO
        permissions = getPermissionsByRole(role.roleId)

        FOR EACH permission IN permissions DO
            IF permission.module == module AND
               permission.action == action THEN
                RETURN TRUE
            END IF
        END FOR
    END FOR

    // Check wildcard permissions
```

```
        IF permission.module == "*" OR
           permission.action == "*" THEN
            IF matchesWildcard(permission, module, action) THEN
                RETURN TRUE
            END IF
        END IF
    END FOR
END FOR

RETURN FALSE
END

FUNCTION matchesWildcard(permission, module, action):
    IF permission.module == "*" THEN
        RETURN permission.action == action OR
               permission.action == "*"
    END IF
    IF permission.action == "*" THEN
        RETURN permission.module == module
    END IF
    RETURN FALSE
END FUNCTION
```

### 8.2.2 Role Hierarchy

```
ROLE_HIERARCHY = {
    ADMIN: [OWNER, TRAINER, MEMBER, CUSTOMER],
    OWNER: [TRAINER, MEMBER],
    TRAINER: [MEMBER],
    MEMBER: [CUSTOMER],
    CUSTOMER: []
}
```

```
ALGORITHM: Check_Role_Hierarchy
INPUT: User user, String requiredRole
OUTPUT: Boolean hasRole

BEGIN
    userRoles = user.getRoles()

    FOR EACH role IN userRoles DO
        IF role.name == requiredRole THEN
            RETURN TRUE
        END IF

        // Check inherited roles
        inheritedRoles = ROLE_HIERARCHY[role.name]
        IF requiredRole IN inheritedRoles THEN
            RETURN TRUE
        END IF
    END FOR

    RETURN FALSE
END
```

### 8.3 3. Membership Package Assignment Algorithm

```
ALGORITHM: Assign_Membership
INPUT: User member, MembershipPackage package, Gym gym
OUTPUT: Membership membership

BEGIN
    // Validate inputs
    IF member == NULL OR package == NULL OR gym == NULL THEN
        THROW InvalidInputException
    END IF
```

```
// Check for existing active membership
existingMembership = findActiveMembership(member.userId, gym.gymId)

IF existingMembership != NULL THEN
    IF existingMembership.endDate > today() THEN
        // Handle upgrade/extension
        RETURN handleMembershipUpgrade(existingMembership, package)
    END IF
END IF

// Calculate dates
startDate = today()
endDate = startDate.plusDays(package.durationDays)

// Create new membership
membership = new Membership()
membership.user = member
membership.gym = gym
membership.membershipPackage = package
membership.startDate = startDate
membership.endDate = endDate
membership.status = PENDING
membership.createdAt = now()

// Assign PT session credits
IF package.includedPTSessions > 0 THEN
    createPTSessionCredits(member, package.includedPTSessions)
END IF

// Save and return
save(membership)
```

```
        sendNotification(gym.owner, "New membership request")

    RETURN membership
END

FUNCTION handleMembershipUpgrade(existing, newPackage):
    // Calculate remaining value
    remainingDays = existing.endDate - today()
    remainingValue = (remainingDays / existing.package.durationDays)
                    * existing.package.price

    // Apply credit to new package
    newPrice = newPackage.price - remainingValue

    // Extend end date
    existing.membershipPackage = newPackage
    existing.endDate = today().plusDays(newPackage.durationDays)

    save(existing)
    RETURN existing
END FUNCTION
```

### 8.4 4. Session Rating Calculation Algorithm

```
ALGORITHM: Calculate_Trainer_Rating
INPUT: Long trainerId
OUTPUT: TrainerStats stats

BEGIN
    // Fetch all ratings for trainer
    ratings = findRatingsByTrainerId(trainerId)

    IF ratings.isEmpty() THEN
```

```
        RETURN TrainerStats(  
            averageRating: 0.0,  
            totalReviews: 0,  
            ratingDistribution: {}  
        )  
    END IF  
  
    // Calculate statistics  
    totalSum = 0  
    distribution = {1: 0, 2: 0, 3: 0, 4: 0, 5: 0}  
  
    FOR EACH rating IN ratings DO  
        totalSum = totalSum + rating.score

## 8.5 5. Analytics Computation Algorithm

### 8.5.1 Revenue Calculation

ALGORITHM: Calculate\_Revenue\_Analytics

INPUT: Long gymId, DateRange period

OUTPUT: RevenueAnalytics analytics

```
BEGIN  
  
    transactions = findTransactionsByGymAndPeriod(gymId, period)  
  
    // Calculate totals  
    totalRevenue = 0  
    revenueByType = {}  
    revenueByDay = {}  
  
    FOR EACH txn IN transactions DO  
        IF txn.status == "COMPLETED" THEN  
            totalRevenue = totalRevenue + txn.amount  
  
            // Group by type  
            type = txn.type  
            revenueByType[type] = (revenueByType[type] OR 0) + txn.amount
```

```
        // Group by day
        day = txn.createdAt.toDate()
        revenueByDay[day] = (revenueByDay[day] OR 0) + txn.amount
    END IF
END FOR

// Calculate growth
previousPeriod = shiftPeriod(period, -1)
previousRevenue = calculateTotalRevenue(gymId, previousPeriod)

IF previousRevenue > 0 THEN
    growthRate = ((totalRevenue - previousRevenue) / previousRevenue) * 100
ELSE
    growthRate = 100
END IF

// Project monthly
daysInPeriod = period.end - period.start
dailyAverage = totalRevenue / daysInPeriod
projectedMonthly = dailyAverage * 30

RETURN RevenueAnalytics(
    totalRevenue: totalRevenue,
    growthRate: ROUND(growthRate, 2),
    revenueByType: revenueByType,
    revenueByDay: revenueByDay,
    projectedMonthly: projectedMonthly
)
END
```

### 8.5.2 Member Statistics

ALGORITHM: Calculate\_Member\_Statistics

INPUT: Long gymId

OUTPUT: MemberStats stats

BEGIN

```
memberships = findMembershipsByGym(gymId)
```

```
// Count by status
```

```
activeCount = 0
```

```
pendingCount = 0
```

```
expiredCount = 0
```

```
// Track trends
```

```
newThisMonth = 0
```

```
newLastMonth = 0
```

### System Workflows - Gym Management System

#### 9.1 1. User Registration & Authentication

##### 9.1.1 1.1 Registration Flow

### 9.1.2 1.2 Login with 2FA

## 9.2 2. Membership Management

### 9.2.1 2.1 Purchase Flow

### 9.2.2 2.2 Expiry Handling

## 9.3 3. Trainer-Member Interaction

### 9.3.1 3.1 Trainer Assignment

### 9.3.2 3.2 Progress Tracking

## 9.4 4. PT Session Booking

### 9.4.1 4.1 Session Creation

### 9.4.2 4.2 Session Lifecycle

## 9.5 5. Chat/Messaging

### 9.5.1 5.1 Conversation

### 9.5.2 5.2 Message Flow

### 9.5.3 5.3 Message Delivery Status

## 9.6 6. Notifications

## Chapter 10

### Features & Functionality - Gym Management System

#### 10.1 Functional Requirements

##### 10.1.1 1. User Management

| ID   | Feature                 | Description                                     | Priority |
|------|-------------------------|-------------------------------------------------|----------|
| F1.1 | Multi-Role Registration | Users can register as Member, Trainer, or Owner | High     |
| F1.2 | OAuth Integration       | Login via Google, Facebook                      | High     |
| F1.3 | 2FA Support             | Email/SMS OTP verification                      | Medium   |
| F1.4 | Profile Management      | Edit personal info, avatar, preferences         | High     |
| F1.5 | Password Reset          | Secure password recovery flow                   | High     |
| F1.6 | Account Status          | Active, Suspended, Deleted states               | Medium   |

##### 10.1.2 2. Gym Administration

| ID   | Feature            | Description                          | Priority |
|------|--------------------|--------------------------------------|----------|
| F2.1 | Gym Creation       | Owners can create and configure gyms | High     |
| F2.2 | Staff Management   | Add/remove trainers, set roles       | High     |
| F2.3 | Equipment Tracking | Inventory, maintenance scheduling    | Medium   |

| ID   | Feature             | Description              | Priority |
|------|---------------------|--------------------------|----------|
| F2.4 | Class Management    | Group fitness scheduling | Medium   |
| F2.5 | Settings & Branding | Customize gym appearance | Low      |
| F2.6 | Invite System       | Private gym invite codes | Medium   |

### 10.1.3 3. Membership Management

| ID   | Feature              | Description                             | Priority |
|------|----------------------|-----------------------------------------|----------|
| F3.1 | Package Creation     | Define membership packages with pricing | High     |
| F3.2 | Membership Purchase  | Members can buy/renew memberships       | High     |
| F3.3 | Approval Workflow    | Owner approves membership requests      | High     |
| F3.4 | Expiry Handling      | Auto-expire, renewal reminders          | High     |
| F3.5 | PT Session Credits   | Include PT sessions in packages         | Medium   |
| F3.6 | Membership Analytics | Track subscriptions, revenue            | Medium   |

### 10.1.4 4. Personal Training

| ID   | Feature            | Description                                  | Priority |
|------|--------------------|----------------------------------------------|----------|
| F4.1 | Trainer Discovery  | Browse trainers with ratings/specializations | High     |
| F4.2 | Trainer Assignment | Request and assign trainers                  | High     |
| F4.3 | Session Booking    | Schedule PT sessions with availability       | High     |

| ID   | Feature            | Description                           | Priority |
|------|--------------------|---------------------------------------|----------|
| F4.4 | Session Management | Complete, cancel, reschedule sessions | High     |
| F4.5 | Workout Plans      | Trainers create customized plans      | Medium   |
| F4.6 | Diet Plans         | Nutritional guidance from trainers    | Medium   |
| F4.7 | Session Ratings    | Members rate completed sessions       | Medium   |

#### 10.1.5 5. Progress Tracking

| ID   | Feature            | Description                        | Priority |
|------|--------------------|------------------------------------|----------|
| F5.1 | Body Measurements  | Track weight, body fat, dimensions | High     |
| F5.2 | Progress Photos    | Upload before/after images         | Medium   |
| F5.3 | Workout Logging    | Record daily workout activities    | Medium   |
| F5.4 | Goal Setting       | Define and track fitness goals     | Medium   |
| F5.5 | Progress Charts    | Visualize progress over time       | Medium   |
| F5.6 | Achievement Badges | Gamification rewards               | Low      |

#### 10.1.6 6. Communication

| ID   | Feature           | Description                        | Priority |
|------|-------------------|------------------------------------|----------|
| F6.1 | Real-time Chat    | WebSocket-based messaging          | High     |
| F6.2 | File Attachments  | Share images, documents in chat    | Medium   |
| F6.3 | Message Reactions | React to messages with emojis      | Low      |
| F6.4 | Read Receipts     | Track message delivery/read status | Low      |
| F6.5 | Notifications     | In-app and push notifications      | High     |
| F6.6 | Email Alerts      | Configurable email notifications   | Medium   |

#### 10.1.7 7. Analytics & Reporting

| ID   | Feature           | Description                        | Priority |
|------|-------------------|------------------------------------|----------|
| F7.1 | Owner Dashboard   | Revenue, member stats, trends      | High     |
| F7.2 | Trainer Reports   | Session history, ratings, earnings | Medium   |
| F7.3 | Member Stats      | Personal progress, attendance      | Medium   |
| F7.4 | Financial Reports | Revenue breakdown, projections     | Medium   |
| F7.5 | Export Reports    | Download as PDF/CSV                | Low      |

## 10.2 Non-Functional Requirements

### 10.2.1 1. Security

| ID    | Requirement              | Implementation                   | Priority |
|-------|--------------------------|----------------------------------|----------|
| NF1.1 | Authentication           | JWT tokens with expiry           | Critical |
| NF1.2 | Authorization            | Role-Based Access Control (RBAC) | Critical |
| NF1.3 | Password Security        | BCrypt hashing (12 rounds)       | Critical |
| NF1.4 | Transport Security       | HTTPS/TLS everywhere             | Critical |
| NF1.5 | Input Validation         | Server-side validation           | Critical |
| NF1.6 | CORS Policy              | Whitelist allowed origins        | High     |
| NF1.7 | Rate Limiting            | Prevent brute force attacks      | High     |
| NF1.8 | SQL Injection Prevention | JPA Parameterized queries        | Critical |
| NF1.9 | XSS Prevention           | Content sanitization             | High     |

### 10.2.2 2. Performance

| ID    | Requirement       | Target                         | Priority |
|-------|-------------------|--------------------------------|----------|
| NF2.1 | API Response Time | < 200ms (95th percentile)      | High     |
| NF2.2 | Page Load Time    | < 3s initial, < 1s subsequent  | High     |
| NF2.3 | Database Queries  | Optimized with indexes         | High     |
| NF2.4 | Caching           | Spring Cache for frequent data | Medium   |

| ID    | Requirement        | Target                        | Priority |
|-------|--------------------|-------------------------------|----------|
| NF2.5 | Connection Pooling | HikariCP (max 20 connections) | High     |
| NF2.6 | Lazy Loading       | JPA relationships optimized   | Medium   |

### 10.2.3 3. Scalability

| ID    | Requirement       | Description                     | Priority |
|-------|-------------------|---------------------------------|----------|
| NF3.1 | Multi-Tenancy     | Isolated data per gym           | High     |
| NF3.2 | Stateless Auth    | JWT enables horizontal scaling  | High     |
| NF3.3 | Database Scaling  | Supports read replicas          | Medium   |
| NF3.4 | WebSocket Scaling | Dedicated connection management | Medium   |
| NF3.5 | File Storage      | External storage ready          | Low      |

### 10.2.4 4. Reliability

| ID    | Requirement        | Implementation                    | Priority |
|-------|--------------------|-----------------------------------|----------|
| NF4.1 | Data Integrity     | Database transactions (ACID)      | Critical |
| NF4.2 | Soft Deletes       | is_deleted flag, recoverable data | High     |
| NF4.3 | Optimistic Locking | @Version annotation               | High     |
| NF4.4 | Error Handling     | Global exception handler          | High     |
| NF4.5 | Audit Logging      | Track critical changes            | Medium   |
| NF4.6 | Backup Strategy    | Database backup support           | High     |

### 10.2.5 5. Usability

| ID    | Requirement          | Description                 | Priority |
|-------|----------------------|-----------------------------|----------|
| NF5.1 | Responsive Design    | Works on all screen sizes   | High     |
| NF5.2 | Intuitive Navigation | Clear menu structure        | High     |
| NF5.3 | Loading States       | Skeleton loaders, spinners  | Medium   |
| NF5.4 | Error Messages       | User-friendly error display | High     |

| ID    | Requirement          | Description                  | Priority |
|-------|----------------------|------------------------------|----------|
| NF5.5 | Accessibility        | WCAG 2.1 AA compliance       | Medium   |
| NF5.6 | Internationalization | Multi-language support ready | Low      |

### 10.2.6 6. Maintainability

| ID    | Requirement       | Description                       | Priority |
|-------|-------------------|-----------------------------------|----------|
| NF6.1 | Code Structure    | Clean architecture layers         | High     |
| NF6.2 | API Documentation | REST endpoints documented         | Medium   |
| NF6.3 | Type Safety       | TypeScript frontend, Java backend | High     |
| NF6.4 | Version Control   | Git with branching strategy       | High     |
| NF6.5 | Code Quality      | Lombok for boilerplate reduction  | Medium   |

## 10.3 Feature Matrix by Role

| Feature          | Member | Trainer | Owner | Admin |
|------------------|--------|---------|-------|-------|
| View Dashboard   | Yes    | Yes     | Yes   | Yes   |
| Edit Own Profile | Yes    | Yes     | Yes   | Yes   |
| Browse Trainers  | Yes    | -       | Yes   | Yes   |
| Book PT Sessions | Yes    | -       | -     | -     |
| Manage Sessions  | -      | Yes     | Yes   | Yes   |
| Track Progress   | Yes    | View    | View  | View  |
| Chat             | Yes    | Yes     | Yes   | Yes   |
| Manage Equipment | -      | View    | Yes   | Yes   |
| Manage Staff     | -      | -       | Yes   | Yes   |
| View Analytics   | -      | Own     | Yes   | Yes   |
| Manage Packages  | -      | -       | Yes   | Yes   |
| Approve Members  | -      | -       | Yes   | Yes   |
| System Settings  | -      | -       | Yes   | Yes   |

# Chapter 11

## Chapter 7: Conclusion

### 11.1 7.1 Project Review and Discussion

The Gym Management System developed during this internship represents a comprehensive solution to the challenges faced by gym operators in managing their day-to-day operations through disparate, costly, or inflexible software tools. The project successfully delivered a multi-role, full-stack web application encompassing membership management, personal training coordination, real-time communication, progress tracking, financial reporting, and administrative controls.

The development process revealed a number of important insights regarding the practical application of software engineering principles.

#### 11.1.1 7.1.1 Achievement of Objectives

The following objectives were defined at the outset of the project and were evaluated against the completed system:

| Objective                                   | Outcome                                                                    |
|---------------------------------------------|----------------------------------------------------------------------------|
| Multi-role authentication and authorisation | Achieved — JWT and RBAC implemented across all four roles                  |
| Membership lifecycle management             | Achieved — complete purchase, approval, expiry, and renewal workflows      |
| Personal training booking system            | Achieved — session creation, cancellation, and rating workflows functional |
| Real-time chat between roles                | Achieved — WebSocket STOMP messaging with delivery status                  |

---

| Objective                                 | Outcome                                                          |
|-------------------------------------------|------------------------------------------------------------------|
| Financial reporting and analytics         | Achieved — revenue charts, transaction tables, and KPI dashboard |
| Security compliance with OWASP guidelines | Achieved — BCrypt, input validation, CORS, and JWT verified      |
| Sub-200ms API response times              | Achieved — validated under standard load conditions              |

---

### 11.1.2 7.1.2 Problems Encountered

Several challenges were encountered during the development process and subsequently resolved:

1. **N+1 Query Problem:** Initial JPA entity mappings resulted in excessive database queries when loading nested relationships. This was resolved through strategic use of `JOIN FETCH` in JPQL queries and `@EntityGraph` annotations, reducing query count significantly.
2. **WebSocket Authentication:** Integrating JWT-based authentication with STOMP WebSocket connections required custom handshake interceptors, as Spring Security's default HTTP security chain does not automatically apply to WebSocket upgrade requests.
3. **Oracle-Specific SQL Dialect:** Several Hibernate-generated queries required manual optimisation for Oracle compatibility, particularly for pagination and sequence-based ID generation.
4. **CSS Cascade Conflicts:** The removal of modular CSS files in favour of a unified design system during mid-development refactoring introduced temporary visual regressions, resolved through systematic audit and class renaming.

## 11.2 7.2 Novelties and Contributions

The project achieved the following notable contributions:

- **Unified multi-role architecture:** A single codebase serving four distinct user types (Member, Trainer, Owner, Super Admin) with dynamically rendered dashboards, eliminating the need for separate applications per role.
- **Open-source gym management platform:** The system provides a free, self-hostable alternative to commercial platforms such as Mindbody and Zen Planner, addressing cost and customisation barriers for smaller gym operators.
- **Integrated real-time communication:** Unlike most competitors, the system incorporated first-class WebSocket-based chat between members and trainers, reducing the need for external messaging tools.
- **Comprehensive internship documentation:** The `docs/` directory provides a detailed technical knowledge base — including ER diagrams, UML models, DFD diagrams, and system architecture documentation — that enables future contributors to onboard efficiently.

### 11.3 7.3 Personal Insights

The internship provided an invaluable opportunity to experience the full software development lifecycle in a professional environment. The author gained significant confidence in managing the complexity of a multi-layered system, making independent architectural decisions, and collaborating within an agile team.

Working across both frontend and backend domains reinforced the understanding that technical decisions in one layer have cascading effects on others — a lesson that abstract academic study alone could not fully convey.

### 11.4 7.4 Future Work

The following improvements and extensions are recommended for future development of the Gym Management System:

---

| Enhancement               | Priority | Description                                  |
|---------------------------|----------|----------------------------------------------|
| <b>Mobile Application</b> | High     | Native iOS/Android companion app for members |

| Enhancement                               | Priority | Description                                               |
|-------------------------------------------|----------|-----------------------------------------------------------|
| <b>Payment Gateway Integration</b>        | High     | Stripe or Razorpay for online membership payments         |
| <b>AI-Powered Workout Recommendations</b> | Medium   | Machine learning model for personalised plans             |
| <b>Microservices Migration</b>            | Medium   | Decompose monolith into independently scalable services   |
| <b>Multi-language Support (i18n)</b>      | Medium   | Internationalisation for non-English markets              |
| <b>GDPR Compliance Module</b>             | High     | Data export, anonymisation, and right-to-erasure features |
| <b>Video Conferencing Integration</b>     | Low      | Embedded video for remote PT sessions                     |
| <b>Advanced Analytics Dashboard</b>       | Medium   | Predictive churn analysis, retention metrics              |

The foundational architecture of the system — stateless JWT authentication, modular service layer, and RESTful API design — was deliberately structured to accommodate these extensions with minimal refactoring.

## Chapter 13

### Appendices

#### Appendix A: System Installation Guide

##### 13.0.1 A.1 Prerequisites

The following tools must be installed before setting up the Gym Management System locally:

| Tool            | Minimum Version | Purpose            |
|-----------------|-----------------|--------------------|
| Node.js         | 18.x            | Frontend runtime   |
| npm             | 9.x             | Package manager    |
| Java JDK        | 17+             | Backend runtime    |
| Maven           | 3.8+            | Java build tool    |
| Oracle Database | 19c+            | Primary data store |
| Git             | 2.x             | Version control    |

##### 13.0.2 A.2 Frontend Setup

```
# Clone repository
git clone https://github.com/coded-with-aryan0426/gym-management-system-fullstack
cd gym-management-system-fullstack/frontend

# Install dependencies
npm install

# Configure environment
cp .env.example .env

# Edit .env with your API base URL
```

```
# Start development server
```

```
npm run dev
```

The frontend development server starts on `http://localhost:5173` by default.

### 13.0.3 A.3 Backend Setup

```
# Navigate to backend directory
```

```
cd gym-management-system-fullstack/backend
```

```
# Configure database connection in application.properties
```

```
# spring.datasource.url=jdbc:oracle:thin:@localhost:1521:orcl
```

```
# spring.datasource.username=YOUR_DB_USERNAME
```

```
# spring.datasource.password=YOUR_DB_PASSWORD
```

```
# Build and run
```

```
./mvnw spring-boot:run
```

The backend API server starts on `http://localhost:8080` by default.

### 13.0.4 A.4 Environment Variables Reference

| Variable              | Description                      | Example                                |
|-----------------------|----------------------------------|----------------------------------------|
| VITE_API_BASE_URL     | Backend API URL                  | <code>http://localhost:8080/api</code> |
| VITE_WS_URL           | WebSocket server URL             | <code>ws://localhost:8080/ws</code>    |
| spring.datasource.url | JDBC connection string           | <code>jdbc:oracle:thin:@...</code>     |
| jwt.secret            | JWT signing secret (min 256-bit) | <code>[secure-random-string]</code>    |
| spring.mail.host      | SMTP host for email OTP          | <code>smtp.gmail.com</code>            |

## Appendix B: Database Schema Reference

### 13.0.5 B.1 Core Tables Summary

| Table Name          | Primary Key     | Description                                         |
|---------------------|-----------------|-----------------------------------------------------|
| users               | user_id         | All user accounts across roles                      |
| roles               | role_id         | Role definitions<br>(MEMBER, TRAINER, OWNER, ADMIN) |
| gyms                | gym_id          | Gym tenant records                                  |
| memberships         | membership_id   | Active and historical memberships                   |
| membership_packages | package_id      | Configured membership packages                      |
| pt_sessions         | session_id      | Personal training session bookings                  |
| trainer_details     | trainer_id      | Trainer profile extensions                          |
| conversations       | conversation_id | Chat conversation threads                           |
| messages            | message_id      | Individual chat messages                            |
| notifications       | notification_id | System notifications                                |

### 13.0.6 B.2 Key Relationships

- Each `users` record is associated with one or more `roles` via a join table.
- Each `gym` has exactly one `owner` (foreign key to `users`).
- Each `membership` references one `membership_package` and one `user`.
- Each `pt_session` references one `trainer` `user`, one `member` `user`, and belongs to one `gym`.
- Each `conversation` contains zero or more `messages`, and involves two or more `users`.

## Appendix C: API Endpoints Reference

### 13.0.7 C.1 Authentication Endpoints

| Method | Endpoint             | Description                  |
|--------|----------------------|------------------------------|
| POST   | /api/auth/register   | Register a new user          |
| POST   | /api/auth/login      | Authenticate and receive JWT |
| POST   | /api/auth/refresh    | Refresh expired JWT          |
| POST   | /api/auth/logout     | Invalidate session           |
| POST   | /api/auth/verify-otp | Verify 2FA OTP               |

### 13.0.8 C.2 Membership Endpoints

| Method | Endpoint                      | Description                        |
|--------|-------------------------------|------------------------------------|
| GET    | /api/memberships/packages     | List available packages            |
| POST   | /api/memberships/request      | Submit membership purchase request |
| PUT    | /api/memberships/{id}/approve | Owner approves membership          |
| PUT    | /api/memberships/{id}/reject  | Owner rejects membership           |
| GET    | /api/memberships/my           | Get current member's membership    |

### 13.0.9 C.3 PT Session Endpoints

| Method | Endpoint                    | Description               |
|--------|-----------------------------|---------------------------|
| GET    | /api/sessions/trainers      | Browse available trainers |
| POST   | /api/sessions/book          | Book a PT session         |
| PUT    | /api/sessions/{id}/complete | Mark session as complete  |
| PUT    | /api/sessions/{id}/cancel   | Cancel a booked session   |
| POST   | /api/sessions/{id}/rate     | Submit session rating     |

## Appendix D: Technology Dependencies

### 13.0.10 D.1 Frontend Dependencies (Selected)

| Package          | Version | Licence    |
|------------------|---------|------------|
| react            | 18.x    | MIT        |
| react-dom        | 18.x    | MIT        |
| react-router-dom | 6.x     | MIT        |
| axios            | 1.x     | MIT        |
| socket.io-client | 4.x     | MIT        |
| framer-motion    | 10.x    | MIT        |
| recharts         | 2.x     | MIT        |
| lucide-react     | latest  | ISC        |
| typescript       | 5.x     | Apache-2.0 |
| vite             | 5.x     | MIT        |

### 13.0.11 D.2 Backend Dependencies (Selected)

| Package                       | Version | Licence    |
|-------------------------------|---------|------------|
| spring-boot-starter-web       | 3.x     | Apache-2.0 |
| spring-boot-starter-security  | 3.x     | Apache-2.0 |
| spring-boot-starter-data-jpa  | 3.x     | Apache-2.0 |
| spring-boot-starter-websocket | 3.x     | Apache-2.0 |
| jjwt-api                      | 0.11.x  | Apache-2.0 |
| lombok                        | 1.18.x  | MIT        |
| ojdbc8                        | 21.x    | Oracle     |
| spring-boot-starter-mail      | 3.x     | Apache-2.0 |
